NAINA MITTAL

CLASS ACTIVITY ON PROMPT ENGENEERING:-

Write a prompt for different situations :--

Write constructive feedback for an employee who delivers great work but misses deadlines consistently.

Act as an experienced HR manager. Write constructive and professional feedback for an employee who produces high-quality work but consistently misses deadlines. The feedback should appreciate the employee's strong work quality, clearly address the issue of missed deadlines, and suggest practical ways to improve time management. Keep the tone supportive, respectful, and solution-oriented, and present the feedback in a short paragraph or 4–5 bullet points.

Develop a 30-day go-to-market strategy for a B2B SaaS tool targeting mid-size companies

You are a business strategy expert. Create clear and practical go-to-market strategies.

Example 1
Input: Develop a 30-day marketing strategy for launching a new fitness mobile app targeting college students.
Output:
Week 1: Market research and define target users. Build social media presence and create teaser content.
Week 2: Partner with campus influencers and run Instagram and TikTok campaigns.
Week 3: Launch beta testing with selected students and collect feedback.
Week 4: Official app launch with referral discounts and campus events.

Example 2
Input: Develop a 30-day go-to-market strategy for a new online learning platform for professionals.
Output:
Week 1: Identify key industries and build landing pages. Create LinkedIn content strategy.
Week 2: Start targeted LinkedIn ads and email campaigns to professionals.
Week 3: Host free webinars and offer trial access.
Week 4: Convert trial users to paid plans with limited-time offers and testimonials.

Now complete the following task.

Input:
Develop a 30-day go-to-market strategy for a B2B SaaS tool targeting mid-size companies.

Output:

Solve step-by-step: If a book costs $15 and is on 20% discount, how much after adding 10% tax?

Act as a math tutor. Solve the following problem step by step and clearly show each calculation. Explain the reasoning in simple language so a student can understand it easily.

Problem: If a book costs $15 and is on a 20% discount, what will be the final price after adding 10% tax?

First calculate the discounted price, then calculate the tax on the discounted price, and finally show the total amount to be paid. Present the steps in a numbered list.

Two team leads disagree on project priorities. Draft a mediation plan that is fair and action-oriented

You are an experienced organizational mediator and leadership coach.

Two team leads strongly disagree on project priorities, causing delays and tension within the team. Your task is to design a fair, structured, and action-oriented mediation plan to resolve the conflict.

Instructions:

1. First, analyze the situation step-by-step, identifying possible causes of the disagreement (communication gaps, resource conflicts, differing goals, etc.).
2. Then outline a clear mediation strategy that ensures fairness and collaboration.
3. Include specific steps for the mediation meeting, such as listening sessions, clarification of goals, and decision-making methods.
4. Provide practical actions and timelines to help both leads align on priorities.
5. Suggest follow-up mechanisms to prevent similar conflicts in the future.

Output format:

- Situation Analysis
- Step-by-Step Mediation Plan
- Action Items and Timeline
- Expected Outcomes

Ensure the plan promotes fairness, transparency, and productive teamwork.

Draw a Figures:-

I HAVE USED CLAUDE.AI TO GENERATE FIGURES USING THESE PROMPTS

1

There is a isoceles triangle which is made on a circle of diameter 14 cm , and this diameter is the base of iso triangle which has 18 cm length on two equal sides and also find the area of the part of triangle which is out of circle. And also shade the upper portion of the triangle out of the circle. Generate the image

2

Generate a clean technical geometric illustration of a 3D cube using only straight lines. The cube must be drawn in isometric perspective with equal edge lengths and three visible faces. Use thin black lines on a white background, no colors or textures. Maintain correct proportions and symmetry so it resembles a textbook geometry diagram

3

Calculate the area of a triangle with a base of 12 cm and a height of 8 cm using the triangle area formula. Show the formula, substitute the values, and provide the final answer in square centimeters. Also generate a geometric diagram of the triangle: draw a triangle with base 12 cm and height 8 cm on a blue background. The triangle should be illustrated using shades of purple with neat shading lines to show depth. Label the base as ‘12 cm’ and the height as ‘8 cm’.

4

Generate a high-quality glowing image of a perfect 5-sided regular polygon (pentagon) placed at the center. The background should be bright blue, and the edges of the pentagon should be purple with a glowing neon effect. Label the five vertices clearly as v1, v2, v3, v4, and v5 around the pentagon

5

Create a glowing mathematical diagram of a circle with radius 7 cm. The circle should have a bright neon glow, with a dark or blue background to highlight the glow. Clearly draw the radius labeled as 7 cm from the center to the edge. Also display the circumference calculation using the formula $C = 2\pi r$, with $\pi = 3.14$, and show the step-by-step calculation and final result in the image.

6

Generate a high-resolution image of a perfect 5-pointed star placed in the center of the image. The edges of the star should be bright yellow with a glowing effect. The background should be a faded dark blue gradient, giving a soft and slightly mysterious look. The star should appear clean, symmetrical, and slightly luminous, with a modern digital art style and smooth lighting

7

Create a small educational diagram of a circle with radius 5 cm. The circle should be drawn with purple edges and a simple clean white background. Do not use any glowing or neon effects. Label the radius as 5 cm from the center to the edge. Also display the area calculation using the formula $A = \pi r^2$ with $\pi = 3.14$ and show the steps and final result clearly near the circle
